

MFP/SOP Cleaning Best Practices

March 2020

RICOH
imagine. change.

- In light of the recent concerns with the COVID19 Corona Virus, everyone wants to know how best to clean their MFP screens and operation panels.

- For generally information regarding the Coronavirus (COVID-19) visit the CDC's website: <https://www.cdc.gov/coronavirus/2019-ncov/about/transmission.html>

- Here are some recommendations

What Should I Avoid?

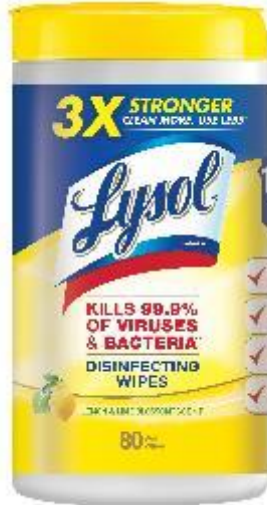

- Avoid anything that contains:
 - **Bleach**
 - **Ammonia**
 - **Other harsh cleaning solvents**

- The touch screen could eventually become clouded and require replacement

What Can I Use?

- Most types of anti-bacterial wipes or sprays

Using a Spray Bottle?

- Lightly moisten a cloth and gently wipe down the screen and panels
 - A lint-free microfiber cloth is recommended
 - Avoid paper towels as they may scratch
- DO NOT spray directly on the device's surfaces or components, as getting liquid inside the device could damage the internal components

Thank you.
